JORDAN RIVERA

123 Tech Lane, San Francisco, CA 94105 | 555-012-3456 | jordan.rivera@email.com | github.com/jrivera-dev

Full Stack Developer with a background in building responsive web applications and modular backend systems. Proficient in modern JavaScript ecosystems and cloud deployment, focusing on clean code architecture and efficient state management. Collaborative engineer with a focus on creating intuitive user experiences through rigorous testing and scalable database design.

EDUCATION

B.S. in Computer Science | San Jose State University May 2026

- Maintained a 3.8 GPA with a concentration in Distributed Systems and Web Technologies
- Relevant Coursework: Data Structures, Database Management Systems, Cloud Computing, UI/UX Design

EXPERIENCE

Software Engineering Intern | TechFlow Systems, San Francisco, CA June 2025 – August 2025

- Built a real-time analytics dashboard using React and Node.js that improved internal data monitoring speed by 25%
- Collaborated with the QA team to implement automated unit testing using Jest, reducing production bugs by 15%
- Refactored legacy CSS into Tailwind utility classes, enhancing mobile responsiveness and decreasing bundle size by 12KB

Full Stack Project: "MarketPulse" E-commerce Platform | Personal January 2025 – May 2025

- Architected a full-stack marketplace using TypeScript, Next.js, and MongoDB, supporting concurrent user sessions and fast data retrieval
- Integrated Stripe API for secure payment processing and Redux Toolkit for complex global state management
- Deployed the application on AWS using S3 for static assets and Lambda for serverless backend functions

Full Stack Project: "EcoTrack" App | Academic Team Lead August 2024 – December 2024

- Engineered a sustainability tracking application using Python/Django and PostgreSQL, managing a team of four developers
- Optimized database queries with indexing, which reduced average response times for heavy reporting loads by 30%

SKILLS

- React, TypeScript, Tailwind CSS
- Node.js, Express, PostgreSQL
- AWS Lambda, S3, Docker
- JavaScript, Python, Java
- Git, Jenkins, CI/CD Pipelines
- Jest, Cypress, API Testing
